

Standard Operating Procedure

Incoming Material Inspection & Acceptance Criteria

Acme Precision Manufacturing Inc. — Quality Management System (ISO 9001:2015)

1. Purpose

This procedure defines the method, responsibilities, and acceptance criteria for inspecting incoming raw materials and purchased components prior to release into production inventory. It applies to all materials received under purchase orders issued by the Procurement Department and is intended to prevent nonconforming material from entering the manufacturing process. This procedure supports compliance with ISO 9001:2015 clause 8.4 (Control of Externally Provided Processes, Products and Services) and customer-specific quality requirements flowed down through purchase order terms and the Supplier Quality Manual (SQM-001).

2. Scope

This SOP covers all incoming materials classified as Critical or Major per the Approved Supplier List (ASL), including: machined metal components, injection-molded plastic parts, electronic subassemblies, and raw polymer resin. Minor commodity items (e.g., standard fasteners from certified suppliers) are exempt per Section 7.2 and follow reduced sampling per ANSI/ASQ Z1.4. This procedure applies to all three manufacturing sites (Plant 1 - Dallas, TX; Plant 2 - Monterrey, MX; Plant 3 - Reno, NV) and is maintained centrally by the Corporate Quality Department, with site-specific work instructions referenced in Section 10.

3. Definitions

Term	Definition
AQL	Acceptable Quality Limit — the maximum percent defective that can be considered satisfactory as a process average
COA	Certificate of Analysis — supplier-issued document certifying material properties for a specific lot
MRB	Material Review Board — cross-functional team that disposes nonconforming material
SCAR	Supplier Corrective Action Request — formal request for root cause and corrective action from a supplier
CMM	Coordinate Measuring Machine — precision instrument used for dimensional inspection
AOI	Automated Optical Inspection — machine vision system used to detect solder/assembly defects
QMS	Quality Management System — the documented system governing quality processes (this SOP is part of it)
